

Make 31

You need: gameboard, counters

Two players each take it in turn to place a counter over one of the numbers.

When a counter is placed on the board the number is added to the total.

This total is kept between the two players, not one total each. Each player tries to make the total come to exactly 31. The player who does so is the winner.

If a player places a counter to make the total over 31 they lose the game.
